Prague, 22$^{nd}$ June 2010

## HWg-WLD: Water flood detector

*HWg-WLD is a network-enabled water leak detector with a water-absorbing sensing cable. HWg-WLD features a built-in web server, SNMP support, and e-mail alerts to flooding. HWg-WLD can remotely control a relay output over the network (a relay is switched when a water leak is detected along the sensing cable).*

HWg-WLD detects water leaks or water floods along the entire length of the sensing cable. The sensing cable detects even the smallest volume of water, ethylene glycol, or other conductive liquid. HWg-WLD can be ordered in two versions depending on the supply of power (power adapter or PoE IEEE 802.3af).
HWg-WLD features a built-in web server and SNMP support. In case of an alarm, the device sends an e-mail or SNMP trap.

**Usage examples**:
- Water detection under raised floors
- Pipe leak detection (cable routed along the pipe)
- Detection cable laid along the walls
- Above suspended ceilings
- Detection of water leaks in drip trays
- Detection of water leaks under A/C outlets

## About HW group

**HW group s.r.o.** *is a manufacturer of network-enabled sensors, based in the Czech Republic. HW group offers products and solutions for remote supervision and monitoring. HW group products are distributed by 30 partners in Europe, Middle East and America.*
